## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election with traverse of Species B in Paper No. 7 is acknowledged. The traversal is on the ground(s) that applicant alleges claims 1-3, 6, 10, 11, 14-17, 26, 28-40 are generic, furthermore the applicant claims a single search should be sufficient for examination of all the different species presented in the claims. This is not found persuasive because it will require different searches for the different species presents in the claims. The examiner does agree with the applicant the claim 1 is generic, however claims 2-3, 6, 1-11, 14-17, 26, 29 are not.

Further examination of the claims demonstrated claim 2 does not read on Figure 1b but its an alternative to figure 1B. Claim 6 further does not read on the elected species, because the pump's inlet does not carry fluid to the pump in figure 1B, it delivers fluid to the delivery device. Claim 21 is depended on claim 12 which has been withdrawn hence claim 21 is also withdrawn.

The requirement is still deemed proper and is therefore made FINAL.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 3, 7, 8, 10-11, 14-17, 19-20, 22, 25, 28-40 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent NO.6491666 to Santini, Jr. et al. Santini teaches an infusion pump including a fluid outlet; a fluid delivery pathway effective for extending from the fluid outlet to a discharge portion positionable at a target tissue site; and a controlled release drug assembly, the drug assembly being configured for controllably releasing drug material, and communicating with the fluid delivery pathway such that the drug material is released into the fluid delivery pathway, wherein the pump assembly is effective to deliver a carrier fluid to the fluid outlet such that the drug material released into the fluid pathway discharges at the discharge portion to treat the target tissue site. Drug assembly is a microchip having at least one drug reservoir; the system also comprises of biosensors. (Figures 12, 8c, 8a, 8b)
